- ☐ **Software Review** ..... p. 33  
Locofont: Trendy typstyles for the PCW

## Next Week

- ☐ We report from the PC User Show, with news of all the latest developments

## Government neglect "effectively blocking" personal data access

BRITISH citizens wanting access to files held on computer databases are being hampered by high access charges and the Government sparse awareness advertising, according to London Labour MPs Chris Smith and Harry Cohen.

Cohen charges that the Government is neglecting the Data Protection Act and is pressing for a Parliamentary adjournment debate to have it revised.

Smith, MP for Islington South, says that while the Government puts its spending priorities on privatisation and in promoting the new look DTI as the Department of Enterprise, informing people about their rights is, he alleges, a low priority.

Cohen told *Popular Computing Weekly*: "The spirit of the Data

Protection Act holds that people should know what is being held on record about them. The high charges made for access to records are off-putting; at £10 a record it has been calculated that some people could spend as much as £800 just to look at all the records held on them by some Government departments. That is effectively blocking their access."

Such charges occur because any person is likely to have a computer record for every occasion they have registered with a department, such as the DHSS.

Smith told *Popular Computing Weekly*: "Most of the people who are taking advantage of the provisions of the Act are those working in Government departments."

Parliament adjournment debate requested.

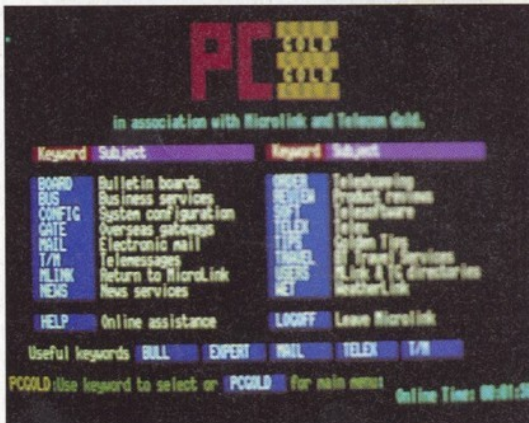

## Colour facelift for MicroLink PC users

MICROLINK has revamped its Telecom Gold service to take advantage of the Prestel July price increase. With the increasing subscription charges, MicroLink is expecting a number of defections from Prestel and is to offer new facilities free for PC users.

A major change to the MicroLink user interface is the colour graphics, replacing the old black and white text. It will make MicroLink the first colour system on Telecom Gold.

New MicroLink facilities will include an on-line library containing reviews of PC hardware and software releases. PC Gold also features keyword searching, which means that someone keying-in will be presented immediately with a review of the package.

The Telex service has also been re-designed and simplified so that users can call up on-screen help

Link-up to colour with PC Gold.

from a clearly-laid-out Telex form. This can be transmitted to the Telex network by a single key-

stroke. PC users can access the new facilities through a re-designed menu.

British  
**TELECOM**

***WE CAN'T GUARANTEE  
EVERYONE WILL COME  
BACK FOR MORE, BUT...***

Whilst many of our courses are designed to be taken in modules some are designed to be intensive to negate the need for further training.

In our experience however we find that more and more of the thousands we train every year nationwide are choosing to come back on other related and completely new courses.

For further details of IBM compatible courses ring us on **Leeds (0532) 451000**

**Make sure you're properly trained**

For customers in the South call our London office on 01-623 4982

All IBM compatible and Amstrad courses subject to availability

**O**UR cover story highlights the fact that revision of the Data Protection Act is essential if the Government is to embrace a semblance of the spirit in which it was drawn up.

That spirit holds that we should all have the right to see and correct our personal data. That can be done only when the population is, (a), made aware of its rights and, (b), has access costs lowered to a reasonable level or removed entirely.

An ironic footnote to the DPA story, and one which shows the spirit is alive somewhere, is that we were unable to obtain names of Conservative MPs with an interest in the DPA.

The House of Commons information office told us that the only two MPs who had asked questions on the subject were the two Labour MPs mentioned in our story. When we asked the Office of the Data Protection Registrar for names of interested Tories, we were told that for reasons of data protection, no names could be given from the Office mailing list.

**M**EANWHILE, at our offices elsewhere in Westminster, we have received a vitriolic defence of Trilogic's controversial C-64 Expert Cartridge. This device allows disc-to-tape and tape-to-disc copying, monitors program disassembly and simplifies program routine handling.

Trilogic is up in arms because it claims that the same games software houses which use it as a programming aid are criticising the system publicly as an encouragement to piracy. Surely a point is being missed here.

The very nature of software makes it more prone to piracy than almost any other product. Any device which aids programming is in some sense bound to help the pirate "programmer", especially when it can perform copying.

If software houses are operating the double standards alleged by Trilogic, they should perhaps be looking at other copy protection methodologies, like code wheels or, as Trilogic suggests, look into bringing the disc prices more into line with those of cassettes.

# U.S. Government under pressure from irate computer makers

By Nick Masters

ATARI and Apple are involved in a new move aimed at scrapping the cause of the current chip shortage. At the centre of the controversy is the U.S. Government Department of Commerce fair market value

legislation which sets a minimum sale price for Japanese chips.

The consortium of electronics manufacturers, which also includes Compaq, Tandem and Tektronix, has asked U.S. Commerce secretary William Verity to cancel the policy and restore free market

competition, which it hopes will stabilise prices and availability according to demand.

The legislation was introduced originally to try to prevent Japanese memory manufacturers selling their chips in the States at 'below market' prices. Their re-

sponse was to increase prices and limit the numbers available.

Many other large U.S. firms disagree with the new move, believing an end to the FMV will result in a return to such 'dumping' activities. Instead, they argue, it should be modified to prevent the Japanese keeping prices artificially high and prolonging the shortage.

Already Amstrad and Atari have been compelled to increase prices because of this multi-national fall-out and it is widely expected that unless the deadlock is broken soon others will be forced to follow.

New high-tech scoreboard at Lord's.

## Lord's bowled over by an Amstrad driven scoreboard

AN Amstrad PC1640 is the power behind the new electronic scoreboard at Lord's cricket ground. The £250,000 board, produced by Vartext Displays, is unusual in that it uses 14,400 discs instead of electric light bulbs.

The discs are controlled individually by the Amstrad and are black on one side and white on the other.

As each run is entered into the computer, a 12-volt pulse is fed to electromagnets behind the discs, thus turning them to display the score.

Any configuration can be digitised on to the computer and displayed.

That means the board can produce pictures, sponsorship logos, advertisements and public infor-

mation. The board can also provide moving pictures.

Two PCs are used for each board. One runs the board while the other is used as a stand-by, allowing the operator to work on graphics or to key-in other information. A similar board will be installed at Wimbledon greyhound track later in the year. It will be interfaced with the tote computer.

## Blast from the past with first Microsoft coin-op

MIRRORSOFT has gained an exclusive licence for its first coin-op conversion, *Blasteroids*, in a cross-licensing deal with Atari Games and its subsidiary Tengen.

Under the terms of the agreement, Mirrorsoft has granted Atari

Games a licence to convert the Soviet game *Tetris* to the Nintendo games console, a machine which is very popular in the United States. *Tetris* has already sold well on the C64 and PC in the U.S. and Mirrorsoft claims that competition for

the Nintendo licence was "fierce".

Mirrorsoft will convert *Blasteroids* to all formats and sell it in Western Europe and Australasia.

Commenting on why Mirrorsoft has waited until now to enter the coin-op conversion market, manag-

ing director Peter Bilotta says: "We were waiting for an exciting and playable game; now we are certain we have a classic product on our hands."

Mirrorsoft will be launching five new games in July.

## Labyrinth in a post box

ANOTHER *Play by Mail* game has been launched by Standard Games. In *Dark Blades* you need to have a shrewd mind to get anywhere. The game is not related to any computer, so anyone can play. The initial cost of joining is \$5. For that you get a detailed A2-size colour map, rule book, registration form and two free turns. Subsequent turns cost \$1.25 each but can contain many complex commands. All this is neatly packed in a colourful box.

There are two races on the island of Labyrinthia, where the game is located. They are the Mon Ogres and the Humans. Both races have been at each other's throats

for many years. Each does devilish deeds to the other, often resulting in war. Each race has two types of character. Traders and Warriors, and every person playing the game has his own characteristics, so no two people are exactly the same. It is predicted that an average game could take up to two years to complete, sufficient to keep the most ardent adventurer busy.

Standard Games can be contacted at Dark Blades, Standard Games PBM, Arlon House, Station Road, King's Langley, Herts WD4 8LF.

## Sticky cover-up

Promotion starts in mid-July.

DISTRIBUTOR Microdealer has launched a software version of a Green Shield Stamps promotion, in which sticky-back tokens will gradually qualify the buyer for a free gift from a catalogue. Called the Great Microdealer Cover Up, the promotion starts in mid-July.

In addition, Microdealer is claiming to be the first games software house to take advantage of the T-shirt mania which afflicts many at exhibitions. Instead of a once-a-year T-shirt blitz, Microdealer will stock dealers with its T-shirts all year round.

# 386 moves downmarket

PRICES are reduced on existing models of the Compaq Deskpro 286, 386 and 386/20. Prices will be reduced by up to 26 percent, taking a typical 16MHz 40MB system down from \$4,195 to \$3,195.

NEC cut \$700 from the price of its 40MB 80386 machine to \$3,995.

Compaq also extended its family of 80386-based PCs with the launch of the Compaq Deskpro 386/25 and the 386s.

The 386/25 - priced at \$5,595 - combines the new 25MHz Intel 386 processor with Compaq Flex Architecture.

This makes use of the 25MHz Intel 82385 cache controller and the new system runs up to 60

Joe McNally, U.K. managing director of Compaq, pictured with the 386/25 and the 386s.

percent faster than non-cache-based systems.

It can also be equipped with up to 1.2 gigabytes of fixed disc drive storage when combined with two of the new fixed disc drive expansion units.

The 386s is the first PC to use the new Intel 386SX microprocessor - see In Brief, June 23 issue. The new system is capable of 35 to 60 percent better systems performance compared to 10MHz 80286-based PCs. Peter Bayley, Compaq marketing director, does not see the launch and price reductions as directly related, and attributed the cuts to a "constant campaign to reduce manufacturing costs."

WHILE speculation still rages over whether Amstrad will launch an 80286- or 80386-based machine this year, an 80286 accelerator card for the PC1512 and 1640 has been announced by London-based Ideal Hardware.

"Even if Amstrad produces a 286 machine, we will still be creating an upgrade path for the existing user base," says James Wickes, managing director of Ideal Hardware.

Running in any IBM PC clone with an 8086 host processor, the ATD 286 board will be available in August priced at \$349. A version is

## Accelerator pre-empts faster Amstrad PCs

also planned for 8088-based PCs and clones.

Applications for the accelerator board are expected to reside mainly in desk-top publishing, where Wickes says PC users are running out of processing power.

The half-card-sized device slots directly into the bus of Amstrad 1512 and 1640 microcomputers.

Features include 8KB of zero wait-state cache memory, which the user can switch in or out from the keyboard. The ATD is also switchable between 8MHz and 12MHz clock speeds and supports the Intel 80287 maths co-processor.

Distribution negotiations are in hand with Amstrad dealers according to Wickes.

## Amiga flying high on Interceptor

THE Amiga share of the games software market has reached its highest-ever level. According to the latest Gallup report for early June, Amiga software has a 2.5 percent share. With the ST share dipping from 6.2 to five percent, the 16-bit formats now occupy 10 percent of the market.

According to Matt Browne, soft-

ware researcher for Gallup, the decline in the ST share can only be attributed to "weekly fluctuations" and is not necessarily a continuing trend.

Fuelling the present rise in Amiga sales is Electronic Arts' *Interceptor*, which rocketed to number 15 in the Gallup early June Top 50. This title is available

only on Amiga and puts the user in command of either an F-18 or an F-16 Hornet in a very realistic simulation.

Mark Lewis, managing director of Electronic Arts, comments: "Obviously there are many Amiga owners waiting for software which 'fulfils the promise' of their machine".

◀ continued from cover

ments, most noticeably the Ministry of Defence. Cohen believes this is because civil servants are "trying to find out why their promotion is being stymied."

Nigel Waters of the Data Protection Registry concurred with

Cohen and Smith; 4,000 public access requests were received from MoD employees against "a few hundred" from other departments.

Waters says that \$300,000 has been spent on two information campaigns, which ran in November, 1987 and March this year.

Some 30,000 requests for information on the Act were received.

Various complaints about the nature of the data found to be on file arrive at a rate of about 30 per week.

They cover a range of abuses, from plain inaccuracy to charges of unfairly obtained data.

## IN BRIEF

### Sink the image

GREMLIN Graphics is hoping to ditch what it calls its "cutie" Monty Mole image with the launch of *Night Raider*, a World War II action simulation. Running on all formats, the package puts the user in the pilot's seat of a dive bomber stalking the Third Reich battleship *Bismarck*. A full review will appear next week.

### ST clipped

DESK-TOP publishing programs running on the ST can now import a variety of standard copyright-free graphics using *Third Clip*, a graphics library from the curiously named Moving Finger Co.

Third Clip comprises 20 full screens of artwork on two discs which retail at \$24.95 for the pair. Details on 0703 229041.

Third Clip - a handy utility.

### Six for summer

AMIGA software house Micro-Ilusions is releasing six new games titles during the summer. There is a June release for *Ebonstar* (\$24.99), an adventure game for up to four players.

In July, the charmingly-named *Craps Academy* (\$24.99) will allow five players to learn the American card game. *Land of Legends* (\$29.99) will be the first in a series of dungeon-type adventures, while *Turbo* (\$19.99) is a road war shoot-'em-up. In *Tracers* (\$24.99) you team with Integrated Human Operations Police to tackle thieves, thugs and terrorists. Due for release in August is *Planetarium*, an astronomy program priced at \$39.99.

## Had it good all along

I note with interest the Shock Horror reaction of Micronet members to the recently-an-nounced off-peak connect charges and increased subscription. As they all prepare to leave in disgust and in the hope that it will change the minds of the powers that be, let me put to them a point which may not yet have sunk home.

Outside the subsidised, closeted world of Micronet, people have been paying for services for a long time. I have subscriptions to various networks, here and in other countries, and none of them is able to offer service for the price Micronet used to offer. They will not change their minds because in reality all they are doing is bringing up their prices to a more realistic level.

Once those ex-Micronetters start to look for alternatives they will find that the truth is they have been having it very good for many years. So far as I can see the only service at the moment which offers anything close to the price deal to which they are accustomed is Compunet which can expect large numbers of new subscribers in the near future.

W. M. Barry,  
Bolton,  
Gtr. Manchester.

## Up-to-date guy

I am advancing in years and in an attempt to keep up-to-date with new technology I am considering purchasing a computer. To pursue this aim I intend to buy a home micro and learn how to program it.

In a conversation with my grandson I have come to the conclusion that Basic would be the best language for me to learn. I am considering the possibility of purchasing a Vic-20 from one of my grandson's friends; could you recommend this machine for learning Basic.

A. Manner,  
Plymouth.

I am heartened to hear that you are not falling behind the times but I would not recommend a Vic-20 for the purpose of learning Basic.

The problem with the VIC is Commodore Basic which lacks many of the features to allow structured programming.

For a more flexible approach you should consider the purchase of an Amiga or an Atari ST, both of which allow you to select a Basic to suit your needs.

## Treading a tight rope

I have programmed a number of games in last four years on the Amstrad 6128 and recently on the Tandy 1000 - IBM type. It was not until the last two years that any of my games have been good enough to publish.

Although I have made many games they all have been for my own use. When I bought the Tandy I had to make my own games or die from lack of IBM arcade games. So, being an arcade addict, I started on a conversion of *Hypersports*. It was soon completed and I soon found that I could convert many of my favourite games.

Only six months after that I had programmed five games - *Hypersport*, *Out Run*, *Space Harrier* - not completed - Section 2 and a very dodgy version of *Afterburner*.

Now that I have these games and want to make some money from them, would it be possible to have them published? Or could I sell each game through well placed advertisements. This applies mainly to *Space Harrier*, as it has 16/32 colour sprites, the waving bloke on the robot and 22 levels of play, all on a full-size screen. Need I say more?

J. Ledger,  
Hampshire.

The "waving bloke on the robot" sounds fun but converting and selling commercial software is illegal. The copyright is part of the game licence. U.S. Gold licences *Out Run* from Sega and has sole rights to the game. If you are intent on selling your conversions your best bet would

be to contact the original software houses to discuss the situation.

## Spaced out

Looking at advertising in *Popular Computing Weekly*, I think you should use more space to provide readers with an up-to-date and detailed analysis of the computer market.

Second, I feel it should contain topical and interesting reviews and features on new releases and upgrades about to be released.

I am pleased to see that some of the original favourites still survive, like Bytes and Pieces and Kenn Garroch, but I would like to see more of the above-mentioned articles. After all, I would imagine that very few readers buy *Popular Computing Weekly* purely on the strength of its advertisements.

K. August,  
Southend.

*Popular Computing Weekly* maintains a healthy balance in respect of the editorial to advertising ratio. Our classified section is the largest in the industry and many readers find those and the display advertisements informative - especially on current pricing.

## Spectrum ignored? - another +3 program

With regard to the letter from P. T. Street of Sidmouth, I share his sentiments on the apparent ignoring of the Spectrum +3 by software houses. As an owner of a +3 I can say I believe that it is a very good machine and good value, especially as it can be obtained for £160 by shopping around.

Unfortunately, I believe that the introduction of the +3 was too late, as it now has to compete with the ST and Atari machines. If only the +3 had been introduced instead of, and at the time of, the Microdrive.

In answer to the plea for more +3 utility programs, may I invite Street, and other readers, to send me a stamped addressed envelope for details of *Flexipage 200*? Available on +3 disc, Opus Discovery disc, Microdrive and tape, this combined 48K/128K authoring system produces a viewdata-type large text and graphic display of up to 200 half-page or 100 full-page displays on a 48K Spectrum and uses the extra memory of 128K computers to interchange programs, data and variable user-defined graphics between ram

disc, disc and cassette.

Filed recently in action and transmitted by Harlech Television on a schools programme Dial 999, the program will run in three modes - automatic for continuous displays, interactive for exercises or adventure games, and free-format for group exercises.

As supplied to nine police forces to date, the program is delivered, in the interests of crime prevention, with a ready-to-use set of interactive exercises. They have been designed for a cross-section of users, from children of five on the Stranger Danger theme, through Neighbourhood Watch-type adventures to house and car security tests and advice, and have been used with success at schools, fetes and youth groups.

David Wornham,  
Droitwich,  
Worcs.

## Taking the good with the bad

I am 16. In the last few months there have been many letters printed which have continued the Amiga-ST debate; this is another. As an owner of the Amiga A500 I can easily see which is the better machine but having said that I am not about to criticise the ST. The Atari ST is a fine machine and deserves its place in computer history.

On the other side the Amiga is a better machine and I believe that anyone who says otherwise has not seen or at least used one in any form. Like anything in life they both have good and bad points but the fact remains that the Amiga is selling more and more every day and consequently the software gets better and better.

I think the only thing they have in common is both based round the Motorola 68000 processor. Apart from this factor they are completely different machines and it is not fair to compare them.

I am not going to resort to the my-computer-has-50-billion-colours-blah-blah-blah school of thinking as I feel that this kind of talk belongs in play school with the four-year-olds. I can only say that I believe the Amiga is about to become the success it deserves to be and I am glad, as I was beginning to have my doubts. As an afterthought, it will be interesting to see what happens now that the ST and Amiga are the same price.

Ian Anderson,  
Birstall,  
Leicester.

MICRONET

# Shades

MULTI-USER GAME

## ACCESS TO A MODEM? THEN DIAL DIRECT INTO THE ULTIMATE ADVENTURE

Without subscribing to Prestel or Micronet you can now dial direct into Shades through Derived Service Network (DSN). Even as one of the leading multi-user games, it has been one of the best kept secrets around. Accessible in either viewdata or scrolling modes, everyone with a micro and a modem will soon be pitting their wits in the land of Shades.

As players are free to roam anywhere, this enthralling game takes you on an adventure unlike any other. Real life choices and decisions to be made, as you meet fellow travellers and strange mystical beings en route.

Begin as a novice and work your way up to the all-powerful status of Wizard but beware there are those ready to trap you. So plan your strategy well – perhaps with others, at one of the Shades popular meeting places.

## CAMBRIDGE COMPUTER

### THE Z88

#### Z80 Processor

- Short travel QWERTY keyboard
- 32K Ram (expandable to 416K)
- 32K Ram (expandable to 384K)
- 3 expansion slots for Rom or Ram cartridges
- Uses standard AA batteries giving 20 hours active use
- 8 lines by 94 characters working display area
- High quality super-twist Liquid Crystal Display
- Wordprocessor, spreadsheet, BBC Basic, Diary, Clock, Calendar and Alarm software as standard
- Weights less than 2lb
- A4 size -  $\frac{1}{8}$  inch thick

## Z88 PRICES

# GAME OF THE WEEK: WASTELAND

## The Survivors

When the nuclear war began a group of U.S. engineers were working on building bridges over dry river beds and ran for cover when the mushrooms started growing. The cover they found was a newly-constructed prison which they occupied, ejecting the former occupants to face the holocaust. They welcomed other survivalist groups but repulsed the attempts of the prisoners to regain what they claimed was "rightfully theirs".

After a few months the prison became known as the Ranger Centre and its occupants the Desert Rangers. As the game begins you control a party of four Desert Rangers who go into the desert to investigate a series of disturbances.

Each member of your party has an exceptional combination of attributes such as strength, dexterity and intelligence and skills to provide a better chance of using a weapon, picking locks, climbing or swimming. You must use those strengths as best as you can to keep your party alive before you delve too deeply into the caves, mines, towns and temples which lie to the west.

Wasteland is one of the few role-playing games which are not filled with spell-casting wizards, dungeons and dragons. Instead it is based in the post-nuclear world where even the lowest thug can wipe out your entire party if he

can outgun you with a sub-machine gun against your pistols, knives and crowbars. It is a world where the meanest and nastiest hoodlums have taken over the towns with their gangs of thugs, jerks and gunmen; deadly war machines patrol the big cities and mutants of all shapes and sizes - usually giant - attack anything which may be food.

Parts of the desert still have

from desert dwellers to the giant slithering lizards and rodents which can attack in large numbers.

Combat demands luck and skill, as each character can de-

vary from leaders to religious cults, robocop chiefs, bartenders, farmers and gang leaders which seem to exert some control over the low life which populate the towns and attack you at a moment's notice.

One of the leaders is a nasty piece of work called Ugly, who moved into a town and took control by kidnapping the mayor. Your job as defender of truth and justice is to launch a commando attack on their headquarters to get him back. Every time you kill a thug or mutilate a mutant your characters will gain experience which can build to be sufficient to earn them promotion, which brings with it two more points on your constitution, two points to add to your characteristics and perhaps even some more skill points with which you could learn how to defuse bombs, decode messages, gamble or patch up your wounded colleagues.

Wasteland was developed by the team which produced *The Bard's Tale* series and includes Ken St Andre, developer of role-playing games such as *Tunnels and Trolls* and *Monster Monster*, as well as one of the first to pioneer the solo dungeon or fighting fantasy game system. The resulting game will have you brawling in bars and fighting with thugs, punks, mutants and lizards and will have you hooked until your quest is complete - or your entire party is gunned down in the attempt.

the glow of radiactivity. They will be deadly to most adventurers and mean that there is no place to run if the going gets tough. Your main problems will be from the almost continuous attack from mutants which range

cide his actions for each combat round which include Run, use an object or skills, attempt to Hire the opponent, Evade or dodge an attack, swap your Weapon or Load or Unjam a useless gun. A series of scrolling messages will describe the ensuing battle and report on shots which hit their target - damage done to your party members is reflected by the decreasing constitution values displayed at the bottom of the screen along with the weapon chosen, ammunition remaining and any armour they are wearing which may absorb the damage.

Wasteland is big. It is supplied on two double-sided discs together with an instruction manual which outlines the skills your characters can learn, weapons they can find and use and places to visit - including Las Vegas - and a booklet containing 162 paragraphs which are used whenever you meet one of the characters of the game. They can

## Amstrad PC1512/1640

We offer a wide choice of Amstrad PCs with many upgrade options - choose the one to suit you needs. For the hard disk option, check out our Evesham upgraded models. Only the best will do - so we normally upgrade by means of a Western Digital Filecard, which includes Xtree and spreadsheet software; however on single drive models we can offer internal installations at the same price (leaving more expansion room but no opportunity for a 2nd floppy drive). Prices in lighter type are excluding VAT.

**Free with 1512 models... Ability and 4 US Gold Games**

LCD Screens - one way of avoiding electronic eavesdropping.

Computer security is a topic few users consider when installing computers, either in the office or at home. Steve Gold looks at how easy electronic eavesdropping is and how to avoid such security threats . . .

**T**he realities of the Data Protection Act, the full provisions of which came into force last November, have made computer users more conscious of physical security requirements. Most sensible computer users who use personal data on their systems now lock their machines at nights and at weekends.

There is no room for complacency. It might interest even the most casual computer user to know that his screen and all data keyed-in and flashed on-screen can be viewed at a distance of several hundred yards using equipment costing around £100.

The culprit in this is electrical radiation. Most computer users will have noticed that their machines can cause problems for listeners to medium wave radios for a distance of several tens of yards. This is due to the radio-frequency emissions of the computer PCB and video output. The bulk of the radio emissions are given out by the video output of the computer in question.

This is due to the relative strength of the signal required literally to push the video signal down the cable to the monitor.

Because the signal is heavily-modulated it is possible for anyone receiving the radio emissions to decode the signal sufficiently to input to another computer monitor situated some way from the innocent computer user.

## Eavesdropping

Although the mechanics of eavesdropping on computer-emitted radiation at a distance have been known by various government security forces since the Second World War, few outside the military upper echelons were aware of the potential security problem until 1985, when Dr Van Eck of the Dutch Telecommunications Authority demonstrated the technology in public at the Securicom Conference in Cannes.

Within weeks the problem was publi-

cised through the specialist electronics magazines throughout Europe. Later that year Tomorrow's World, the BBC TV programme, gave a practical demonstration of the techniques involved. Several of my industry colleagues co-operated actively with the Tomorrow's World technical staff in completing the demonstration.

While the use of computer surveillance techniques may seem to belong to the world of James Bond, its occurrence is more common than most computer users would imagine. Several banks and newspapers have been hacked using radio frequency eavesdropping. Since the equipment involved in electronic eavesdropping of computers can be assembled for slightly more than £100 and the circuit diagrams of the equipment required have been published in several electronics magazines, it is logical to assume that any reasonably competent computer expert could eavesdrop with the same ease as turning in Radio 1 on a Walkman radio.

It does not take the genius of a computer security specialist to protect against electronic eavesdropping. Protection against the real menace of computer eavesdropping is really a matter of combining common sense with practical security considerations. Any electronic or electrical systems (such as a computer) used to process information is likely to radiate signals. In computers, in order of vulnerability, the main offenders are VDUs, printers, communications carriers - bearers and cables - and the computer PCB.

There are two main methods of protecting you and your computer from electronic eavesdropping - a reduction in the ERF given off by the component concerned or to generate a masking signal which effectively swamps the signal which could be eavesdropped.

## Maximum power

While there are a few small devices in the latter category which make life difficult for the would-be eavesdropper, the Wireless and Telegraphy Act places a limit on the maximum power which can be pumped out by these units. In practice, it has been shown that masking an electrically-transmitted signal is ineffective against the well-equipped eavesdropper. All those devices do is to make life a little more difficult.

So we are left with trying to reduce the level of the ERF to the point where the potential eavesdropper would have to be too close to the machine in question to decode the signal. This can be achieved in one of the two ways - signal source suppression or signal encapsulation.

Signal source suppression relies on careful circuit design and positioning of computer components in such a way as to minimise the amount of ERF given off by the computer. Most commercially-available computers score badly in this respect, since they are not normally built with such standards in mind. A number of computers are produced with the idea of minimum signal radiation foremost in their specifications. These computers are produced for the government and conform to what is known as the Tempest or NACSIM standards.

## Tempest

Tempest is a classified standard issued by the U.S. intelligence services and involves shielding the computer to the extent where little or no ERF leaks. The NACSIM standard is the NATO equivalent of Tempest. Both standards are known only to top military computer producers and staff on either side of the Atlantic.

Signal encapsulation works on the same principles as the metal cases which surrounded many of the earlier computers. By

shielding the computer any stray radiation which could interfere with other electrical machines nearby, e.g. TVs and radios, is minimised.

One of the most effective encapsulation techniques used by banks and financial institutions involves the installation of a chicken wire mesh cage round the computer or computer room. By earthing the wire cage any stray radio signals can be trapped and fed to earth.

Some business computer users think such security precautions are unnecessary. As a recent case involving the Comet and Dixons store chains showed, industrial espionage has reached the point where even a private detective can use electronic eavesdropping as a means to garner useful information.

One of the most effective ways of preventing electronic eavesdropping has been on the computer market for several years - non-VDU screens. Most portables

for most users' needs. Recent advances in LCD screen technology have made the gas plasma screens appear rather over-priced. Having said that, some of the popular Toshiba lap-tops, notably the T3100 series, still use gas plasma technology.

As a computer journalist I am asked occasionally about computer security. In one case I discovered a financial colleague to have a security problem in that his offices were located across the street from a rival bank's headquarters. Naturally, the risk was very slight that such well-respected financial institutions would employ such underhand tactics as electronic eavesdropping but the risk was quantifiable and very real considering the large volumes of bank customers' money which was processed through the office in question.

After obtaining several quotations to screen the offices in which he maintained his computers, my colleague requested my

A typical unshielded computer installation.

and lap-tops now use liquid crystal display or gas plasma technology as the means of displaying the screen output.

LCDs are the most effective method of avoiding electronic eavesdropping, since they are refreshed only when data on the screen changes. Usually the electrical refresh impulses are so weak as to be undetectable more than a few inches from the computer.

Gas plasma technology, although not so quiet electrically as LCD screen systems, is still much quieter in electrical terms than conventional VDUs. Unfortunately gas plasma technology is still a little too costly

help. After surveying the offices in question briefly, I discovered that the safe was situated along one wall of the office.

By carefully relocating the two most sensitive - in financial terms - computers behind the safe and away from the window, the potential for electronic eavesdropping was reduced considerably.

In this case, common sense saved the bank concerned more than £8,000 in security installations. It also taught me that some computer security salesmen can be over-zealous when selling their systems. A little common sense can often reap big dividends. □

# MCD COMPUTER AUCTIONS

## FOR SALE BY AUCTION

Liquidated, bankrupt, repossessed and end-of-line Computer Equipment including NEW IBM, COMPAQ, OLIVETTI, APRICOT, HEWLETT PACKARD and AMSTRAD PC's, PRINTERS, LASERS, PLOTTERS, DISC DRIVES, PORTABLES, MONITORS, VDU's and SOFTWARE. PLUS a whole range of second user items from Keyboards to Tape Readers and Test Equipment to Add-on Cards.

## SOFTWARE HOTLINES

By now all Amiga owners will be struggling with the wheel of death, the centre of the copy protection for *F/A 18 Interceptor* from Electronic Arts.

The wheel must be consulted every time you collect a new option from the main menu, except for the demonstration.

Before you C64 owners be-

come too smug, beware - the wheel is on its way in *The Bard's Tale III*.

A little-known fact about these fiendish little devices is that on the early pre-production versions of *F/A 18 Interceptor* the wheels were constructed by Electronic Arts public relations officer Lesley Mansford using a blunt instrument. At this point I would like to say that we really appreciate this - honestly.

Due to a total lack of a witty introduction, I will get straight to the point. Not only are sports game fanatics in for a treat but

for the first time in the history of this planet - assuming you do not believe in cyclic civilisations - *Summer Games I* and *II* will be available for Amstrad and Spectrum computers.

The games will be released as part of the Gold, Silver, Bronze collection, which will feature the 28 events that can be found in *Summer Games I*, *Summer Games II* and *Winter Games*.

Staying with the sporting theme, *Summer Olympiad* is a collection of sports games for the Atari ST. The demonstration which arrived in the post looked very good but until the games are finished and I get to grips with the gameplay it is a little too early to say whether Tynesoft has a hit on its hands or not, but the early results would suggest so.

At this point I would like to take a firm grip on my leg and pull my foot firmly out of my mouth - why change the habits of a lifetime?

As we all know, Rainbird does not write games. It promotes and distributes them:

*Whirligig* - the name of the

game that I spelt incorrectly last time - is being programmed by Mike Singleton and a very good job he is doing.

His previous work includes such gems as *Lords of Midnight* and *Dark Sceptre*.

David Braben, co-author of *Elite*, is responsible for the conversion of *Zarch*, the Archimedes classic, to *Virus* for the ST and Amiga.

The long-awaited sequel to *Starglider*, *Starglider 2* - a game I am dying to play - hint, is being developed by Argonaut Software, which is headed by one Jez San.

Last but by no means least is Realtime Graphics, which is in fact the operational name of Ian Oliver, Graham Baird and Andy Nations.

Realtime Graphics is responsible for the Z-80 and IBM PC versions of *Starglider* and the IBM version of *Elite*. Perhaps their most notable contribution to the entertainment of the masses is *Carrier Command*, a game which took the industry by storm.

Adrian Pumphrey

## PUZZLE

"This is interesting", said Jamie to Ben, handing him a pocket calculator. "Enter the number 1599 and then multiply it in turn by the numbers 2 to 9 and note the results." Ben jabbed away at the calculator and scribbled the following list:

```
1599 x 2 = 3198
      x 3 = 4797
      x 4 = 6396
      x 5 = 7995
```

```
x 6 = 9594
x 7 = 11193
x 8 = 12792
x 9 = 14391
```

"Note how none of the products contains a single zero", continued Jamie. "In fact, it is easy to find a number of values with this peculiarity. What I was wondering was if there are any set of products in which every value contained at least one zero. The initial number

must contain four digits and, to make it more difficult, must not itself contain a zero - but every product formed by multiplying from 2 to 9 must include a zero."

After a few minutes Ben reported "I have found 1512, which scores zeros in seven out of the eight products. Only 1512 times 3 does not contain a zero".

Can you do any better and find a number which scores eight out of eight? ☐

## PUZZLE SOLUTION

### Solution to puzzle Village Triangulations of June 16-22.

The distances were:

Amblebury to Birchmere, 4,060 yards  
Amblebury to Cobbleham, 4,059 yards  
Birchmere to Cobbleham, 5,741 yards

From the information given the three villages stand at the angles of a right-angled triangle, with the Birchmere to Cobbleham distance being the hypotenuse and the other two distances differing by just one yard. If the smaller of the two legs

is 'S', the larger will be S+1. In the program these two values are placed in variables S and L. The hypotenuse (H) is

```
>
100 S=3500
110 L=S+1
120 Z=S*S+L*L
130 H=SQR(Z)
140 H=INT(H+.5)
150 IF H*L=Z THEN
PRINT S; " "; L; " "; H
160 S=S+1:GOTO 110
```

found by using Pythagoras' Theorem. For the answer to be correct, this must be an integer - whole number.

Because of certain inaccuracies found when square roots are computed by most micros, lines 140 and 150 use a technique to overcome this by checking by direct multiplication - which is accurate - that the square root, when squared, is equal to the square from which it had been computed.

As the distance from Birchmere to Cobbleham was estimated at 'about three miles', the minimum distance of the smallest of the two legs is taken as 3,500 yards. ☐

# Synthesising sound on the Atari ST

Kenn Garroch explains the working of a program which will allow you to implement full ADSR envelope generation using the Atari ST sound chip.

The Atari ST is not blessed with the world's greatest sound system and, unless you have access to sound sampling equipment, getting the internal sound chip to produce any reasonable sound effects can be somewhat difficult. The problem lies with the rather basic nature of the AY 2149 sound chip used in the ST. It has three tone channels, one noise channel and an enveloping system - see figure one. In the normal course of events, sounds will consist of turning the tones on and off to produce beeps and selecting envelopes to get pre-defined attacks and decays. The ST, however, has a reasonably good and easily-accessible interrupt system, the simplest being the Vertical Blank interrupt which occurs every time the screen is updated by the system. Using this and a little machine code programming it is possible to enhance the possibilities of the sound chip to the point where complete ADSR - Attack, Decay, Sustain and Release - envelopes, modulated sounds, and other tricks which are standard on other sound processors, e.g. the SID in the C64, are possible.

## Basic idea

The basic idea of the program is to use the interrupt to run a routine which reads through a sequence of instructions which can, in turn, be used to program the sound chip. There are three channels, each with its own instruction list and, within the capabilities of the sound chip, is completely independent. There are 12 instructions in the program shown but after studying the process a little, other instructions and options can easily be added to provide an even more flexible system.

The most basic instruction is that used to turn a channel on and select its pitch and volume. Looking at the layout of the sound chip in figure one you can see that the pitch of a channel is set with a 12-bit

value, giving a range of values from 0-4095. The first 8-bit register is generally known as the fine tune or FT and the second 4-bit coarse tune or CT and the frequency produced by setting these bits is:

$$\text{Freq} = \frac{2000000}{16 * ((256 * \text{CT}) * \text{FT})}$$

Giving a complete range from 30.5Hz to 125KHz.

Instructions 1, 2 and 3 are used to set the pitch, mixer setting and volume/envelope select for channels A, B and C respectively. Following the instruction number, two bytes are used to define FT and CT. The next byte is the mixer - reg 7 - setting and each bit apart from the topmost - bit 7 - corresponds directly to the layout shown in figure one. Bit 7 is to tell the program whether to set the relevant bits or whether to clear them. So to turn on tone channel A, the value %00000001 is used. The % sign normally defines a binary number for most assemblers.

When bit 7 is set to 0 the program interprets this as 'set the following bits' in the mixer register. If it is set to 1 the program will clear the specified bits. To turn off tone channel A use the value %10000001. This arrangement means you can ignore any previous settings, i.e., those used by other channels, and specify the bit of the mixer required for the operation.

The final byte of this instruction is used to set the volume of the channel - A, B or C, 1, 2 or 3 - to tell the sound chip to use the built-in envelope generator. The lower four bits - values from 0-15 - are volumes, the fifth bit - actually bit 4 since the first is bit 0 - specifies an envelope and the lower four are ignored. So to set up channel A (or 1) to play an 'A' (440Hz) at full volume, use the following:

1,2,28,%00000001,15

Substitute 2 or 3 in the first byte for channels B and C and move the mixer bit left to the correct position for the channel - see figure one. There is only one noise

channel in the sound chip and it is used for all three channels. The pitch or frequency of the noise can be set with instruction 4. This is a value from 0-255 and the frequency is found with the formula:

$$\text{Freq} = \frac{2000000}{16 * N}$$

where N is the value in the noise pitch register - reg 6 - and gives a range of 4KHz to 125KHz. The instruction is simple, i.e., 4,0 will give the highest pitch noise - a hiss. To get a channel to make the noise, the noise bit in the mixer must be selected. So the commands are:

4,0  
2,0,0,%10010000,15

Set channel B to produce noise at full volume.

The final command which affects the sound chip directly is No. 5 which selects the internal envelope and its period. There are three bytes following the command. The first two select the time of the envelope, i.e., 0-65535, low eight bits followed by high eight bits. To define the period use (EL+(256\*EH)) where EL and EH have values from 0-255.

## Envelope type

The third byte value selects the envelope type to be used. Figure two shows the possibilities, they are not very exciting but as you will see later this can be improved by using the program. As an example of a 'ping' like the bell sound on the ST, use:

snalsta dc.b 1,0,1,%10000001,1,15

which selects channel A for pitch, mixer and envelope. Followed by:

dc.b 5,0,64,0

which selects an envelope period of 64\*256 (16384) and envelope type 0. It also activates the envelope generator in the sound chip.

Instruction No. 6 does nothing and is available to mark time, basically it is No Operation or NOP and does nothing but

move the instruction pointer to the next command.

The next two instructions are used to make the program loop. The first - No. 7 - saves the current position of channel A, and the second - No. 8 - causes the program to jump back to the saved position. This allows sounds to be repeated over and over again. Instructions 9 and 10 and 11 and 12 do the same thing but for channels B and C.

## Turning on

To turn on a channel, the instruction pointer for the channel, held in memory location 'sndpos(a/b/c)' must be set up with the address of the instruction list for the sound to be used on the channel. Then the flags in sndnfa(b/c) should be set to 1. If the list of instructions does not loop it should be terminated with a value of 255. This causes the program to stop reading instructions and clear the on/off flag for the channel.

The operation of the program is straightforward. The interrupt routine is set up by replacing the standard vertical blank interrupt routine with the new sound processing one. Note that this disables parts of the disc system and some of the internal clocks but since they are not necessary to the program they can be ignored. The keyboard click is turned off, since it interferes with any sounds you might set up on channel A, and then the keyboard is scanned for one of four keys.

Pressing 1 tells the program to run through the list of instructions of channel A, 2 is for B and 3 is for C. Escape is used to exit back to the system. This is rather basic but shows how the program can be incorporated into your own. All you need do is set up the pointer and flip the flag and the sound will start. A glance through the comments should enable new commands to be added; put them in the list and write a routine.

As an example of a programmed envelope, look at the data list sndlstc. It creates a three-tone bell sound on one channel (C) and starts with the volume at 15. As the instructions are read, the volume is reduced to give a fading envelope while altering the pitch to get the three tones. By changing the number of times the various volumes are repeated, the shape of the envelope can be modified. Sndlstb uses the internal envelope system to create its noise sound but alters the frequency as it goes.

Sndlsta shows the effect of the repeat and how the pitch and volume can be changed while the sound is in progress. A little experiment should show that with this program you can generate fairly sophisticated sounds from what is, at heart, a simple sound system. □

Fig 1 - Sound chip internal registers

Fig 2 - Envelopes selected from sound chip register 13.

| Command No. | Byte 1                     | Byte 2     | Byte 3  | Byte 4  | Comment                   |

## YOUR MICRO DESERVES THE BEST ...

When your home or business micro costs several hundreds of pounds, it deserves the finest repair facilities in Europe (well, probably!). And the finest prices - £5 off trade rates for a limited period only. ★ How? At Verran we use our own range of advanced automatic test equipment (now sold worldwide), backed by stringent 2-8 hour soak-rack testing. That means speed, ultra-low prices and, most important, guaranteed reliability. For the first three months we'll repair any fault free. For the next three, at half these quoted prices. ★ It's the finest service available.

★ Currently we handle over 3500 products on average every day. Providing services for such leading companies as Amstrad plc, Commodore Business Machines, Sinclair Research, Rank Xerox, Dixons, Currys, Boots, W H Smiths, John Menzies and many more. ★ Join them and take up our special offer now.

# The curse of the Mad God

Ken Matthews gets down to the nitty gritty of *Bard's Tale III* and rounds up some adventure games soon to be released such as *Land of Legends* and *Return to Doom*.

Tarjan's vengeance was swift and terrible. Skara Brae lies bare and ruined following the god's awful onslaught. A few refugees camp in a pitiful collection of tents which overlook the wreckage of the once-fair city. The Mad God turns his wrath elsewhere and the dispirited survivors ponder the bleak future and speculate how the Evil One can be stopped.

This bleak scenario is the start of the latest in the award-winning *Bard's Tale* series, as those who read the last issue will

**"The Bard's songs now seem much more useful and, as the title, *The Thief of Fate*, suggests, the rogue class must really come into its own in this game. The thief's abilities are now listed separately, as in *Dungeons and Dragons*."**

appreciate. Subtlety and logic are claimed as the bywords for this chapter of the Tale.

Briefly, your party must travel through the seven dimensions to discover the source of Skara Brae's destruction. Along the way you will need to collect the spells and items to aid you in your confrontation with the Evil One.

Dimension travel is new to this version

Bard's Tale III.

and requires one of the new mage skills, Chronomancy, before such hops are possible. New spells have been added to give more than 100 in all. The Ultimate mage is now the Geomancer who can tame Earth itself to deal out awesome damage to foes so long as the spell points last. When his power is spent, though, he can use most of the weapons of the fighter classes. The Pathfinder spell shows a plan view of the whole of a dungeon level to prevent you getting lost.

With 84 dungeon levels to explore on the different dimensions it is sensible to have the ability to save almost at will and the characters have been given a great deal of thought and development as well.

The Bard's songs now seem much more useful and, as the title, *The Thief of Fate*, suggests, the rogue class must really come into its own in this game. The thief's abilities are now listed separately, as in

*Dungeons and Dragons*. I am sure this will give pleasure to many veteran Bardsters, including Jim Piper of Farleigh Wallop, who sent me his thoughts on the subject.

## Unprotected

The game disc is unprotected to allow back-up and faster loading. Protection is provided for in the form of the code wheel which is needed for those inter-dimensional jaunts.

Needless to say, with so much in the package, I have only just started but the gameplay is superb and very absorbing. The animation of characters is excellent and atmospheric. My package is the colourful, fold-out American version and has a large format manual and code wheel. I hope Electronic Arts will introduce this as

continued on page 24 ►

◀continued from page 23

U.K. packaging as it greatly increases the 'feel' of the product and is a great improvement over the disc-sized plastic cases used to date.

Bard's Tale III, The Thief of Fate is a superb product and by far the best role-player available for the C64. The way in which the series has evolved is typical of the Electronic Art continual struggle for excellence and its dedication to more serious software. I await the 16-bit versions with relish.

## Land of Legends

Mediagenic/Activision is set for a July release of the MicroIllusions title *Land of Legends* for the Amiga. Using a 3D format for general exploration and bird's-eye views for combat sequences, all the classic D&D features are promised.

Good news next for the purists. Topologika has released the latest game from ace programmer Peter Killworth.

He has been around for a long time, having produced a series of brilliantly-designed and tough games for the BBC range of machines.

His book on writing adventures on the BBC was a classic. One of his most memorable games was *Countdown to Doom*, a bid to escape the planet Doomawangara where your ship had crashed.

Now you must *Return to Doom* in the new title to rescue an ambassador captured by renegade robots. The start of the game is deceptively simple but soon the Kilworth touch appears. Weird alien creatures, strange artefacts and space-born diseases dog your every step and, speaking of dogs, a little friend can be obtained, very reminiscent of the Infocom empathic robot Floyd.

## Over-priced?

Despite the built-in help function, Balsak has yet to complete this top-notch text game but it is good to see a professional, bug-free game which holds the attention without pretty pictures and gimmicks. *Return to Doom* is available on most 8-bit formats except the C64 but may be a little over-priced at £12.95. You can order from Topologika, PO Box 39, Stilton, Peterborough PE7 3RL.

Now a moment to pause for thought and ponder the philosophy of adventuredom in general and the Balsak approach in particular.

Many of you have written in praise of the column and a few with constructive criticisms which I have done my best to accommodate.

You will remember at the outset that my

Award winning series from Electronic Arts.

aim is to produce a chatty, informal column with a blend of adventure, role-playing and strategy reviews, news, tips and a forum for your opinions.

Dozens of you want to know what I have played, what my criteria are for judging products, do I detest arcade games, why do we not have a weekly column?

## Ramblings

You can see that the answers could fill the column for several weeks and not leave space for the other features I feel more important than my ramblings. Also much of it is covered in a piece I have been asked to write for The Adventurers' Club. I will be happy to supply a copy if you send an S.A.E. after the article has been published; I will let you know when.

A few words on the other points: I play arcade games but my reflexes are about as fast as those of an arthritic sloth, so I tend to prefer the slower types with some strategy element, like *Wizball*, *Bubble Bobble* and particularly two German imports, *Giana Sisters* and the brilliant *Emerald Mine*.

## Bi-weekly

We do not have a weekly column for editorial reasons. We decided I could cover more in a bi-weekly, two-page column than with a weekly page.

You do not tend to see me criticise a

product too often because I hate to waste valuable space with vitriolic prose about a sub-standard game.

I would rather spend time on some details of titles I think contribute to our sector of the software market.

If I cannot detect a single good feature in a piece of software, I prefer to ignore it.

If a game falls into the so-so category I usually cover it, remembering, as I hope you do, that any review is only one person's opinion and tastes differ.

## High note

To end on a high note, I have now received more than 60 letters which, among other things, all included requests for help on *Dungeon Master*. Most now seem to be about two problems. First, 'When is Rock not Rock?' The answer being - when you can walk through it. Try walking into the wall to the left of the inscription.

Many have recovered the Firestaff but are not sure what to do next. I shall not wreck the game by telling you but if you read the instruction book and the scrolls on level 7 carefully you should be able to work it out.

I sign off with the promise of a treat for wargamers next time. There are some real scorching titles from Electronic Arts but you will need to buy a C64 before reading - it is well worth it. □

*"Our programming team can build a business system or program for you, why not call us."*

## Marauder - CBM 64

Captain C.C. Cobra gunned the engine of his *Marauder* Battlecar and patted the front-mounted laser cannon fondly. Today the weakening auto-defences of Megatron would fall and the jewels of Czymandius would be returned to their people.

The jewels are located deep beneath the planet Megatron, placed there by a cruel and despotic race after their theft.

Captain C.C. Cobra intends to attack the planetary defences in his *Marauder* land vehicle and recover the jewels.

This horizontally-scrolling shoot-'em-up allows you to participate in the heroic deeds of Captain C.C. Cobra as he moves up the screen taking out the planetary defences. Not only is the *Marauder* armed with a laser cannon but it also has a limited supply of smart bombs which can be used to eliminate all nasties

inhabiting the screen. Track-bound vehicles fire barrages of bullets and missiles, while airborne nasties drop bombs and throughout this manic maelstrom you must guide a rather sluggish attack craft and blast a path through the mayhem.

Shooting the pulsating defence beacons has a range of effects on your craft, depending on its colour when shot. The effects range from 10 seconds of invincibility to a reversal of the craft controls.

The game is presentable with pleasant graphics and sound effects but there is nothing about it that makes it stand out from the crowd. A strictly average offering.

## The Fury - Amstrad CPC

Hailed as a space age demolition derby, *The Fury* will take you to the middle of the Universe to do motorised battle at Warp Factor 10. It is set on a looping track, otherwise known as a rim and, as Earth's champion, you must enter into battle with the reckless and cunning victors of all the known worlds.

Sounds exciting? Well, not really. Your skill and expertise will ensure the accumulation of Galactic Groats, the official currency. They are necessary to buy the more sophisticated cars and equipment which are essential if you are to stand a dog's chance against the nasty Noid-controlled cars. Noids, in case you are interested, are the lowest form of life, struggling to become Real Rim Racers by completing the circuit successfully.

Each Noid has a bounty on his or her head, so as you eliminate them you gain more Groats. You can spend them on basics like fuel and repairs or weapons like flame throwers, machine guns and missiles, which can kill up to six Noids. The most expensive buy is the Anome car, which will cost a hefty 14,000g. For that

price you will achieve the greatest speed and get the best protection.

If that sounds difficult there is the added complication of *The Fury*. It is some strange force-field which mysteriously sucks in drivers; only one has ever returned and unfortunately he is now mute.

The graphics are very unimpressive. It was extremely difficult to read the instructions and the cars resembled a five-year-old's efforts. The sonics were of the crash-bang variety and did not really serve any purpose, as

they were so weak. As for gameplay, it claims to be fast, addictive, blistering and sensational. I did not find it to be any of them. I would substitute slow, uninteresting, dull and boring - but I was never a very good driver.

# PIPEDREAM

## the REALITY

PipeDream is a step forward in integrated software.

With existing integrated packages, you have to divide your work into artificial sections, such as text, numbers and calculation, and database.

With PipeDream, you compose your work in the order you want to print it, with text and numbers all together in one document. Incorporate calculations directly into paragraphs of text and formatted paragraphs directly into spreadsheets.

With this new approach you get a whole new dimension of power...

PipeDream is a word processor offering many columns of formatted text. That film script you were going to write next holiday? Ideal.

PipeDream is a spreadsheet program with a work area of 8192 columns by over 500,000,000 rows, so you'll grow out of your computer before you grow out of PipeDream.

And being able to mix numbers and text together means you can calculate invoices and mail-shot them without resorting to expensive accounting software.

In fact, PipeDream's unique integration means that mail-shots couldn't be easier.

Simply type in your letter or invoice, leaving gaps for names, addresses and payment dates. Then PipeDream will print the letter to each addressee, automatically inserting all the details, and keeping the text neatly formatted and aligned.

And database and spreadsheet functions can work together.

You can use PipeDream as a database program to maintain your address book or sales ledger. Perform selections and sorts to invoice all of those customers living in London who have bought more than 100 products from you since February but haven't paid within 30 days.

The price of all this power? Just £99 + VAT. You can't afford not to have PipeDream. Especially when you consider the price of existing 'integrated' packages.

But don't just take our word for it. This is what Michael Bywater of *Punch* had to say:

*"PipeDream itself is a remarkable achievement. It offers a spreadsheet, a word processor and a database, and if you think I am talking about a conventional integrated program, you are wrong. PipeDream does all those things within one program. No switching between modules or cutting and pasting; PipeDream simply offers you a matrix of 'slots' into which you can either type continuous text or figures or formulae or database 'fields'."*

That was PipeDream on the Z88.

Now we've completely rewritten it for IBM PC and compatibles. The result is even friendlier, faster and more powerful. There are full menus and dialogue boxes, making the most complex operations easy to carry out. You'll probably never even need to look at the comprehensive PipeDream tutorial and reference book. And keyboard wizards will love the optimised keystroke alternatives to the menus. Some will even devise their own key layouts, using PipeDream's unique keyboard programmability.

We've maintained 100% file and keystroke compatibility with Z88 PipeDream, so you can transfer files between the Z88 and your PC.

New facilities include:

- user-definable colour displays
- a comprehensive range of financial functions
- full usage of foreign characters including direct editing and printing
- loading and saving in several formats giving compatibility with Lotus 1-2-3, SuperCalc, Excel and many other spreadsheets

- linking files enabling you to pass the results of calculations between spreadsheets
- special 43x80 display on EGA and 50x80 display on VGA.

This in addition to all the facilities many thousands of Z88 PipeDream users have come to expect:

- fully wysiwyg display (what you see is what you get)
- many columns of formatted text on screen
- full spreadsheet power includes dates
- live calculations within formatted text
- flexible printing of special highlights such as underlining and bold text
- documents consisting of many separate files.

As *Punch* summed up:

*"PipeDream offers as much spreadsheeting power as you can need to bullshit the opposition, and what's more, you can write your lies and then make up your sales projections in the same document, just by telling PipeDream that this next bit is numbers or text or a database or what you will."*

Quite.

## Stalingrad - Spectrum

In 1942 the German army met with grief as it attempted to take Stalingrad. It suffered massive casualties; 32 divisions were lost and a further 16 were severely depleted. The cause of this military disaster was a combination of bad tactics and the ferocity of the Russian defenders.

This program sets up the ini-

tial troops positions and then leaves you to decide the outcome of the battle, perhaps changing the entire course of the war.

As the controller of the German army your objective is to take and hold *Stalingrad*. To enable you to achieve the objective you have the 1st and 4th Panzer armies, 2nd, 6th, 11th and 17th armies and the Rumanian army under your control.

A system has been created to allow supplies from captured cities and troop reinforcements, giving the game an increasingly complex set of objectives which need to be met to maintain the armies under your control.

For a Spectrum game the graphics are surprisingly good, although the state of the graphics in a strategy game should make little difference to the overall game but, then again, it all helps.

No sound effects are included in the game in an attempt not to glorify war but to produce an environment in which it is possible to re-enact the battles fought in and around Stalingrad.

## Corruption - Atari ST

I was going to start by commenting on how true to life this adventure game is but I soon realised that you might gain the wrong impression from that comment.

There is little point in describing a Magnetic Scrolls adventure as I am sure you are all familiar with the standard of games it produces but for all adventurers new to the area let me briefly

sum up by saying its games have great graphics with puzzles which become more and more logical with each new release.

The plot to *Corruption* follows the antics of a naive businessman who has been framed by his partner. To extract yourself from this mess and stay out of jail you must gather your resources and con, bribe and blackmail your way through a host of characters to become every bit as

ruthless and detestable as they are.

If your character is slow on the uptake, the game may be a little short as there are one or two slightly less than scrupulous characters in the game and their aims and your life expectancy have something in common.

This is by no means an easy adventure but one I would heartily recommend to the more hardened adventurers with a taste for a little backstabbing.

The graphics, as with all Magnetic Scrolls adventures, are superb and the parser is good. A game well worth checking if you feel like getting a little mind-bending intrigue with great graphics.

◀ continued from page 29

enter the race for which it is worth dying. In fact that is exactly what most competitors do.

**Program** *Rockfall* **Price** £1.99  
**Supplier** Maynard International Ltd, 12 Chiltern Enterprise Centre, Station Road, Theale RG7 4AA.

Pothole madness as Richard the potholer strikes gold. Your task is to collect the gold without receiving a fatal blow on the head from a boulder.

**Program** *Skate Crazy* **Price** £12.99  
**Supplier** Gremlin Graphics Software Ltd, Alpha House, 10 Carver Street, Sheffield S1 4FS.

It is time to clean up your town as you don your roller skates and hit the streets showing the judges a clean pair of wheels.

**Program** *Bionic Commando* **Price** £8.99  
**Supplier** GOM, Media Holdings Ltd, Units 2-3, Holford Way, Holford, Birmingham B6 7AX.

Leap into the action as the *Bionic Commando* flexes his arm and enter the enemy base in an attempt to neutralise the doomsday weapon.

**Program** *Hoppingmad* **Price** £7.99/£12.99  
**Supplier** Elite Systems Ltd, Eastern Avenue, Lichfield, Staffs WS13 6RX.

Get hopping as you guide a string of spheres across the landscape avoiding sharp objects and collecting balloons.

### Hoppingmad - CPC

**R**elax, get away from the manic actions of day-to-day life, play the game and practise those mantras as you progress sedately through the levels. I admit it is a rare game which requires the user to exhibit non-violent actions against fellow creatures.

The objective is to control a string of four balls as they bounce along the landscape, at-

tempting to avoid the objects likely to bring their existence to grief.

To complete a level you must collect 10 balloons which can be found drifting across the screen; bounces can also be collected by making contact with apples and various other objects.

The controls consist of speed up and slow down, as well as bounce higher, which is needed to reach the elusive apples and the

balloons before they drift out of range.

The game starts in a forest where you must avoid such hazards sphere-eating plants, birds and bees. On completion of the first level you move to a seaside landscape which for some reason contains rocks and cacti.

There are several pleasant features, including the sedate pace of the gameplay. The number of lives is limited to three but with four spheres in a chain you affectively have 12 lives per game.

The graphics are good but the loading screen is especially good. It is a pity the loading screens do not affect the gameplay. With competent sound effects, the game is perfect for players who prefer to rely on judgment and timing rather than lightning reflexes or vast amounts of mental agility.

### Arena - CBM 64

**H**is mind raced as he plotted and counter-plotted in a vain attempt to keep the grey wizard's forces from his person. At the other side of the arena the grey wizard rejoiced at the predicament of his opponents, unaware that the green wizard was about to annihilate them both. So begins a multi-player combat game of magic and strategy. *Arena*.

The High Mage is starting to feel his age, so he has decided to retire. His successor is to be chosen in the arena, an area of wizardry combat where only the strongest and most cunning of sorcerers will survive to inherit the coveted title of High Mage.

The arena consists of a large square area populated with grass, trees and Mirkwood forests which attack enemy players and their creations who wander too close. Also within the arena are the combatants. Up to eight players can take part, controlled either by the computer or human players, allowing co-operation and deceit to prevail which greatly enhances any game of this type.

The spells available for your player's use are selected randomly from a list of 80. The spells cover a wide range of applications, giving both defensive and offensive options. Monsters can be summoned to increase your army or the landscape can be altered to enhance your situational defences.

Each spell is aligned with good, evil or neutral and subsequent casting of spells changes the prevailing atmosphere.

The game is surprisingly good despite the less-than-perfect graphics, mainly due to the num-

ber of players allowed and the large variety of spells. The music is best turned off to allow you to concentrate on a game which could well prove to be a budget classic.

# For the Z88

**B**

ased on one of the most successful programs for the BBC Micro, SPELLMASTER has now been re-written for the Z88. Supplied as a plug-in ROM cartridge, it can be permanently available – there is no loading of programs from disc etc.

Using the built-in editor SPELLMASTER provides check-as-you-type combined with fast and simple text entry. Other features include:

- ☒ A dictionary of almost 60,000 words built into the ROM.
- ☒ Optimised English dictionary – not American English.
- ☒ User extension dictionary allows this number to be extended.
- ☒ User dictionary may be edited, like normal text.
- ☒ User dictionaries can be saved and loaded to and from file or other computers, as ASCII files.
- ☒ Fast word search, available as a pop-up from within any Z88 program, that searches through the ROM and user dictionaries for any of the following:
  - Words that sound like the one specified.
  - Words that are spelt approximately like that specified – this is ideal for guessing mistyped words.
  - Words that have one or more letters missing (solves crosswords).
  - Words that have the correct letters, in the wrong order (solves anagrams).
- ☒ Browse through the dictionary.
- ☒ Built-in text editor. A simpler more straightforward text editor than Pipedream. This editor offers the following:
  - Fast scrolling.
  - Read and write Pipedream text files.
  - Block delete, move and copy.
  - Insert or Overwrite modes.
  - Pipedream like deletes – back forward, word, line etc.
  - logical standard editing features, i.e. words wrap as you type, lines can be split by pressing RETURN at any point, lines may be joined by deleting back from the line start.
  - Check-as-you-type, without slowing down typing.
  - Spell check entire text at 5000 words per minute.
  - Check word at cursor.
  - Check text from cursor onwards.

The real use of SPELLMASTER is not always in correcting spelling mistakes. Few people are expert typists, especially on a lightweight portable such as the Z88. SPELLMASTER can detect typing errors just as easily as spelling mistakes and can ensure that text entered on the Z88 is correct before it is downloaded to other computers.

SPELLMASTER is more powerful, and certainly more convenient, than many spelling checkers provided on larger micros.

**Price £51.30 + VAT (£59.00 incl.)**

## Programmers, Dungeon Master,

## Artists, Musicians

Level 9 are expanding into new types of games in addition to our existing adventures. We therefore urgently require several people to join our in-house programming team, including:

- \* **68000 programmer** to work in-house on fast action special-effects graphics routines for the ST and Amiga.
- \* **Role-playing "Dungeon Master"** with some interest in programming and the proven ability to run imaginative fantasy/SF role-playing sessions, to co-design the games.

And to work on a freelance or full-time basis:

- \* **Artists** to work on all styles of computer graphics (especially CBM64 and ST)
- \* **Musician/sound technician** to program music/FX.
- \* **Programmers** on all other machines for conversion work.

Fed up with being messed about on never-ending fixed-price contracts? Or with publishers who just want 16-bit clones of dull 8-bit games? Want to redefine the state-of-the-art? Then send a full CV and a sample of your work to:

Mike Austin, Level 9, 5-11 Mendip Road, Bracknell, Berks. RG12 3XG. (Accommodation can be provided in Bracknell if necessary.)

## PROGRAMMERS

- \* Have you the technical expertise and creative skills to produce high quality original and conversion software?
- \* Are you multi-lingual with working experience of 8 and 16 bit computers?
- \* Have you several years experience in the industry with at least one commercially published program to your name?
- \* Are you self motivated, capable of project analysis and meeting deadlines?
- \* Are you willing to work in-house, be it on full-time or freelance basis?

We are a well established and innovative software house seeking dedicated programmers who want a successful career in entertainment software. If you think you qualify and are interested in advancing your career, please write including your CV or telephone:

# Designer writing

Emma Norman reviews a new package for the Amstrad PCW which allows you to write with style.

Many people must often have wished that there were alternatives to the standard types on an Amstrad PCW, because whenever a document of any kind has been printed by a computer, whatever you may do to it, it always looks as if it has been printed by a computer. Until now that is. For Locomotive Software has introduced *Locofont*, a software package which gives you a choice of 12 fonts.

The fonts supplied on the *Locofont* disc are in two forms, one for use as the main typeface the other as alternatives. There is also a facility to design your own characters for each new font using *Locochar*, described in the *Locoscript 2* user Guide, which is useful, if you can understand it.

The main failing of *Loco* Software is that its manuals are decidedly difficult to understand. The *Locofont* manual is slightly easier than most, compared to its counterpart the *Locokey Keyboard Designer*, which has, possibly the worst set of instructions it has ever been my misfortune to read. At least with the *Locofont* manual Locomotive has taken steps to separate the instructions for a dual drive machine 8512 and the 8256, listing stage by stage the operating instructions under clear headings, and open with details about how to set up your disc.

The first thing to do when changing fonts is to choose which typestyle you will use most often and set it up as the main 'default' typestyle. This process is relatively fast and simple, you copy the fonts you prefer to your start-of-day disc to replace the *MATRIX PRI* file already there and move them into drive A. The only disadvantage to this is that, because of lack of space, there is a limit to the number of files you can input. So as the manual suggests you have either two discs, one without *Locospell*, or double the disc drive memory.

You can change the fonts available on your machine as often as you wish but another disadvantage to the package is that the settings file can store details of only 10 files at most. To add new ones you must remove the old, so you never have immediate access to 12.

The fonts available are Capital font, recommended for advertisements in shop windows; Copper Plate for invitations; Definite for guarantees; Deco for menus;

Finesse for announcements; Modern for machine instructions; Script for writing letters; Roman, Sans serif and Standard one and two.

The manual advises that when printing in a new font the best results are to print at high quality, a number of them being designed for high-quality print only.

To use any of the fonts you need to set up the document specifically for that font and ensure that the font is the 'current' character set when printing.

Another minor disadvantage to the package, is that there is no facility to review the font on-screen, which would be helpful.

The fonts with which I was most impressed were the script, which is joined-up writing, and Deco, is a very 1930s flowing style. Another new piece of software launched by Locomotive is the *Locokey Keyboard Designer* which enables users to customise keyboards with virtually any accents they wish so that, by pressing a single key, a letter will appear with the chosen accent above it. With *Locokey* the whole keyboard can be transformed into Arabic or Greek. Having examined that manual thoroughly I am considering waiting for a good Samaritan to publish a clarity guide to it before reviewing it. □

**Program:** *Locofont*  
**Machine:** Amstrad PCW

## Blank set

Gillian Harris, of Hackney, London, writes:

**Q** In the June 2-8 issue you mentioned a 'good book' on the subject of the Mandelbrot set. I would like to display some of the pictures on my ST but I cannot work out how to do it. Could you give me an example program?

**A** The trick is to follow the instructions in the appendix - do it yourself. The program shown should give you a starting point on how it is done. The main problem with displaying the set on the ST is that there are only 16 colours. To get more detail, the number of colours `cmax%` is set to 1023 and the colours are cycled through with `c%=k% mod 16`. You can also do it in black and white with `mod 2`. The program was written in HiSoft Compiled Basic but it should be easy to convert it to any other Basic of the Microsoft type - or any other for that matter. The only disadvantage is that it is rather slow. The picture in the example takes more than an hour to draw. For this reason it is best to save it as soon as it is drawn. If you have *NeoChrome*, create a blank picture - called `PICTURE.NEO` - from within it and then run the program. The `bload` loads the blank picture into memory, draws the Mandelbrot and then saves it as the program finishes it. The file `MANDEL.NEO` can then be loaded into *NeoChrome* and the colours changed for the best effect.

## Ramming away

E Bruce, of Southend, writes:

**Q** Since the disc drives on the ST are so slow I have taken to using a RAM disc when programming.

The only trouble I have found is that when I re-set the machine with the little switch at the rear, the RAM disc does not seem to go away properly. It has gone from the desk-top but, when I try to re-initialise it the program assigns the next drive letter. If the RAM disc was drive D, after a re-set the program assigns drive E.

I also run out of memory after a few re-sets. What can I do about this? Is it a problem with the RAM disc program or the ST?

**A** It is a problem with both the ST and the RAM disc program. Re-setting the ST causes a warm boot and, although the drive may not appear on the desk-top, unless saved, so far as the GEM is concerned there is a section of memory still set aside for it.

The problem with the program is that it should de-allocate any previous memory set aside for the RAM disc when the re-set switch is pressed and then re-allocate it when asked.

The trouble is that it does not seem to be doing this. The easy answer is to switch off the ST for about 10 seconds to get it to cold boot. An alternative is to get a more advanced RAM disc program.

## Hot headed

Alan Sangster, of Royton, Lancashire, writes:

**Q** I have been using my ST 1040 a great deal in the last few weeks and have noticed that it becomes hot at the top left-hand side of the case. Is it satisfactory to leave it on for long periods over-night or will it over-heat?

**A** You should have no trouble so long as you do not block off any ventilation.

Do not leave books or pieces of paper on top of the machine. Make sure that the surface on which you stand it is hard and flat, i.e., a desk-top.

I leave my ST on for days, without problems so far. For all that it becomes a little warm but I do not think that is anything to worry about.

## Write Protect - C64

Alex Jones

**T**his small program for the Commodore 64 with 1541 or compatible disc drive will disable all "write" commands except for the "ID Format". ☐

```
10 REM WRITE PROTECT (C) 1988 ALEX JONES
20 OPEN15,8,15,"I":OPEN8,8,8,"#"
30 PRINT#15,"U1,8,0,18,0"

60 PRINT#8,CHR$(0);
70 NEXT
80 PRINT#15,"U2,8,0,18,0"
90 CLOSE15:CLOSE8
```

## Boot up - ST

Gareth Pople

**H**ere is a short listing for the Atari ST using GFA Basic. The program performs a useful function many ST owners have been seeking - the ability to boot from any drive.

Most desk accessories and programs in AUTO folders work although not all are compatible. Desk accessories which load resources files will not work as they search for those of drive A. ☐

```
Print "Boot drive switcher." ' at 446 hex, 1094 decimal
Print "Gareth Pople 17/5/88" Print
Print Print "Press space for desktop,"
Print "System boot device number." Print "or reset to boot."
Print "0=A 1=B 2=C etc."; Repeat
Input Boot% Until Inkey$=" "
Spoke &H446,Boot% Cls
' F0KEing priviledged word
```

## Datestamp - ST

Paul Morley

**D**atestamp is a simple date and time-setting program designed to be resident in an AUTO folder, so that the time and date can be set on power-up.

The program has been written in HiSoft Power Basic. Once the program has loaded, follow the on-screen prompts to set the time and date. ☐

```
' DateStamp by P. Morley 1988

# INVEST NOW

Having invested wisely in computer hardware and software all successful businessmen and women know that they must maximise that investment.

To get the best use from your computer systems you need professional training for yourself and your staff.

Text books and manuals are all aids to learning but we at the BSSU feel there is no replacement for interactive tutor-led courses and judging

## IN PROFESSIONAL COMPUTER TRAINING FOR YOU AND YOUR STAFF

COMPUTER & SOFTWARE TRAINING

from our customer response (over 3000 students last year) we must be right.

You owe it to yourself to make the most of your investment in the most up to date technology, so if you're head of a multinational or a partner in a young company we're happy to invite you to join the thousands of others who are investing in training from the BSSU.

JUMPDISK published monthly at  
1493 Mt. View Ave.  
Chico, Calif. 95926  
Phone: (916) 343-7658

**JUMPDISK IS TWO YEARS OLD!** There have been 24 consecutive issues published on the first day of each and every month. Articles include tutorials, reviews, news items, hints and tips - these may be printed, read from the screen or listened to. Programs range from useful utilities to games, spreadsheets and databases. Subscribing to Jumpdisk saves money. The cost for 6 months is £45.00, a reduction of £6.00. You will also benefit from numerous special hardware and software offers. Subscribe before the end of July 1988 and we will include a very original and impressive piece of software with your first issue.

### PUBLIC DOMAIN - MORE NEWS

Even at a price level of £3.00 per disk, many Amiga users shy away from using Public Domain material. This could be the result of their experience with poor quality P.D. programs on other formats or perhaps some of the less known Amiga P.D. libraries. To entice you to try FISH, AMICUS and FAUG Disks we have put together the P.D. STARTER PACK. It includes the JUMPDISK LIBRARY DISK which details the contents of over 250 P.D. Disks from three of the most popular libraries - the BEST OF AMICUS (4 disks) + GOLDFISH (3 disks). These disks have been compiled by the librarians, who consider the programs to be among their best. The cost of this very special collection is only £19.99. A saving of over £4.00 if the disks were purchased separately. If you already have the Directory Disk please substitute any other P.D. disk.

**ANNOUNCING AMIGA-AMP + FREE MUSIC DISK** (includes S/W to

disable A500 Sound Filters)..... **£17.99 (£16.50)**  
At last it's possible to appreciate and enjoy the true stereo sound of the Amiga. By using Amiga-Amp with a pair of Walkman style headphones (not included) games are brought to life. Output of 1.5 watts with volume control. Battery excluded.

(STEREO HEADPHONES FOR AMIGA-AMP)..... **£4.99**

### SOFTWARE

**ANNOUNCING TURBOPRINT FOR ALL AMIGA COMPUTERS**

..... **£25.00 (£23.50)**

- SPECIAL INTRODUCTORY PRICE FOR JULY - (G.T.S. SOLE U.K. DISTRIBUTORS)

The revolutionary Amiga printing system program \* Graphic print up to ten times faster \* Supports all possible screen resolutions \* Pictures are better and richer in contrast - you can choose four colour conversions \* New 4096

colours in HAM mode can be printed in sections and rotated \* Special turbo drivers for any print density of your dot matrix printer, thermo printer, ink-jet or laser printer \* Resident hardcopy function prints any screen you like \* Thoroughly compatible with Amiga software \* Installed resident in your computer's memory \* Detailed manual \* Runs with all Amiga.

**ANNOUNCING INT-SWITCH RECOMMENDED FOR THE A500 WITH OVER 512K OF MEMORY**..... **£9.99 (£8.99)**

- SPECIAL INTRODUCTORY PRICE - (G.T.S. SOLE DISTRIBUTORS)  
An outstanding program that freezes RAM-expansion. Allowing programs requiring a maximum of 512K to be run without difficulty.

**FLIGHT-SCENERY DISK "EUROPE"**..... **£24.95 (£20.05)**

Yes! At last it's available. The Scenery Disk all owners of Sublogics Flight Simulator II have been waiting for - Compatible with JET. We also stock scenery disks no. 1 through no. 12.

We are **GEORGE THOMPSON SERVICES** - Our address is: FREEPOST, DIPPEN, BRODICK, ARRAN, SCOTLAND KA27 8BR. Our telephone No. is: (0770 82) 234. # CP/M Plus Mallard BASIC

Now you can turn your Spectrum +3 into a real computer!

## Vast Range of Software

CP/M Plus is the latest version of CP/M, the standard operating system for Z80 computers. This means that there's lots of software ready and waiting to run on your Spectrum +3.

## Standard Discs

CP/M Plus for the Spectrum uses the same discs as +3DOS, so you'll be able to read and write your Spectrum discs. But it can also use the discs for the most popular CP/M machines about – the Amstrad CPC and PCW – so you'll be able to run many programs for these machines as well.

## Standard Screen

CP/M Plus on the +3 can emulate a standard 24 line, 80 character screen, so most existing CP/M software should run without any problems – we've even kept the control characters the same as the Amstrad CPC and PCW computers, so programs for these machines should run with little or no change.

CP/M Plus is a trademark of Digital Research Inc.

Using the PCW benchmarks, Mallard BASIC is five times faster than Spectrum BASIC. It's not only faster, it's more accurate too!

## Fast BASIC

*But don't just take it from us,  
Crash magazine's verdict was:*

"At £30 for CP/M Plus, utilities, and Locomotive [Mallard] BASIC, this package is a bargain if you're at all interested in computers for their own sake. . . . Even if you don't want to be a hacker, you can be a 'power user' with CP/M, using whatever parts of it appeal, to run a customised computer system for work, business or fun."

## Powerful BASIC

Mallard BASIC understands +3 discs – so you can read and write disc files, serially or randomly. Using Mallard's built-in "Jetsam" commands, files can be indexed by key and sorted into alphabetical order. You could use this, for example, to create a database. Jetsam is designed to give quick access to your data.

## Compatible BASIC

Mallard is compatible with the industry standard BASIC, so there's lots of public domain programs you can pick up and run with little or no change. Once you've written your own programs, you'll find it easy to move them to other, more powerful, computers. Mallard also runs on PC compatibles and on the Amstrad PCWs.

Mallard BASIC is a trademark of Locomotive Software Ltd.

**STOP!!!****LOOK NOW****NEW!! FOR ST**MAIL ORDER  
ONLY**POOLS-SYSTEM!!™**TRADE  
WELCOME**INCORPORATING (POOLSBUSTER & POOLSPANNER)****OTHERS CALL THEIR POOLS PROGRAMS ULTIMATE, WE CALL OURS****"THE" POOLS PROGRAM**

As far as we know there is not anything like this in the market on any computer. Do you fancy yourself as a pools winner? Have you played the pools day after day, month after month, year after year and won absolutely nothing? Did you ever wish a pools win no matter the amount, as long as it was a win? If the answer is "yes" to only one of the above questions then it looks to us that you are in desperate need of our "POOLS-SYSTEM". So do not despair, read on and take the decision that is going to change your life for the better and make coupon filling fun and most importantly rewarding. **ORDER POOLS-SYSTEM NOW.**

**POOLS-SYSTEM** consists of the following two programs:

**Poolsbuster** is the only pools program on the market on any computer that we know of, with **Artificial Intelligence**. It forecasts a set of draws for you on one Saturday and as soon as you enter the pools results, it analyses where it went wrong, and it fine tunes itself for a correct forecast next Saturday.

You've probably used programs that forecast based upon team form or position, or based on the team's past results, or based upon the team's goal difference etc. But if you use **Poolsbuster** you'll see that it's quite a different beast. It combines all the necessary elements for the calculations it needs to analyse the matches and compares them with a massive data collected and corrected over a period of years, of virtually over 10,000 matches. We've even taken care of the hardship, of typing the necessary information into the program each time you want to use it. Everything is laid out to you for easy reading and selection via the mouse. **Poolsbuster** is the friendliest pools program on the market. **Poolsbuster** is good for all seasons, for any country for any kind of Football Pools (German, Italian, Greek, Dutch, etc). **Poolsbuster** comes with all the teams that are used in the coupons, even Beazer, GM Vauxhall, Northern Premier etc. **Poolsbuster** allows you to add your own teams for different pools, for example German, Australian etc. We Guarantee that **Poolsbuster** performs better than any other pools program on the market on any computer, because we Guarantee to you that using the **Poolsbuster** in cooperation with **Poolsplanner** you are going to win the pools more than once a year.

**Poolsbuster costs only £35.00 inclusive P&P**

**Poolsplanner** is the partner to **Poolsbuster**. It can be used to create for you the ideal system, the system that you can afford to play. It can create for you lines and combinations that can be useful for the pools, fixed odds or lotteries. It can even forecast for you. For this reason it can be used without the **Poolsbuster** entirely on its own. Combined though with **Poolsbuster** you have a pools forecasting system, second to none, which the pools experts would love to put their hands on.

**STOP PRESS!!** 4/6/88 **Poolsbuster** forecasted 40 out of the 58 matches, **Poolsplanner** forecasted 7 out of 7 score draws and 4 out of the 6 no score draws. In cooperation both of them they produced 24 points. 25/6/88 **Poolsbuster** forecasted 16 out of the first 19 matches correctly and combined with **Poolsplanner** as **Pools-system** it produced 1 second divided, 2 third and 2 fourth dividends, not to mention the minor dividends.

**Poolsplanner costs only £20.00 inclusive P&P**

Buy both programs and save yourself £15.00 – Pools System (**Poolsbuster** + **Poolsplanner**) costs £40.00 inc.

**APOLONIA SOFTWARE PRESENTS: COMPUSHOP1**

# Learning Computing the Logo Way

I was in Canterbury when someone who heard that I dabbled occasionally in Logo asked me whether I thought the language lived up to all the claims of its inventor, Seymour Papert. I replied that while it probably had not made the great advancement in mathematical learning often ascribed to it, it had succeeded admirably in introducing a generation of young people to computers in a simple and amusing way. In the U.S. especially, the idea of letting people learn by making a robot turtle drive all over the floor has been more widely accepted than in the U.K.

In this respect Logo has succeeded far better than if it had produced millions of mathematical geni.

Getting people to use a computer without fear is one of the most difficult tasks in teaching about the machines. The younger generation feels at home with them, having been brought up with them in one form or another.

The next generation will be even more at home with them, since almost every electronic device will have a computer of some kind in them.

There are still a large number of people who are afraid to touch a computer. The

fear is an irrational one - that they will somehow break the machine, or it will 'bite' them - and yet it remains.

The usual arguments about the machines being completely safe and already running many areas of their life do nothing to convince them.

One way is through fun. A game, whether of *Space Invaders* or a more peaceful adventure, may not be the best use for a computer but it is fun and can take away the fear of a computer. Another such introduction is Logo.

This language can provide a good introduction, especially when connected to a floor turtle.

In Britain its use seems to have been somewhat hampered by the widespread use of Basic in home computers, together with the lack of external control facilities in the cheaper models and the expense of the turtles.

In general, people with home computers preferred to use the five minutes a program took to load from cassette to load a game rather than a language.

The latest generation of micros could change all of that.

Their disc drives allow programs to be loaded and tried quickly, while the high-

quality graphics available render a turtle unnecessary and less fun than an onscreen version.

With these machines being established in schools and homes, Logo could have a new chance to introduce people to the fun of computers.

The advantage of the language over a game is that, once the initial fun has been overcome, it provides a basic grounding in the techniques used in all forms of programming. To get the turtle to draw a particular shape it is necessary to plan what needs to be done, determine how to do it, and finally write and enter a program to do it.

This, in essence, is what programming is about and the techniques learned with Logo will stand users in good stead whatever they then do in computing - or any other walk of life. In addition, a full implementation of the language allows experiment beyond turtle graphics and into the world of list processing.

Perhaps Logo has not lived up to the claims of its inventor but it has succeeded, and will continue to succeed, in a far wider and more important area. Long may it prosper. □

Robert Halliday

## HACKERS

# NEW LOW PRICE ST!

## ST PRICE INCREASE

Due to a worldwide shortage of memory chips, prices of many computers have gone up. From April 1988, the Atari ST range is also likely to be affected. For details of any price increase, please return the coupon below for our latest literature.

**£260** +VAT=£299

## SO MUCH FOR SO LITTLE!

There is nothing that can compare with the incredible value for money offered by Atari's 520ST-FM. For only £260 (+VAT=£299), you can purchase a powerful 512K RAM computer, with a 95-key keyboard (including numeric keypad), MIDI interface, GEM, a palette of 512 colours, mouse controller, and a 512K built-in disk drive. The 520ST-FM has a TV modulator built-in, and comes with a lead to allow you to plug it straight into any domestic colour television set. The mains transformer is also built-in to the keyboard, so there are no messy external boxes. You couldn't wish for a more compact, powerful and stylish unit. Atari ST computers are now firmly established in the UK, there are nearly 500 software titles already available for a wide variety of applications and the list is growing all the time. And that's not all. When you buy your new 520ST-FM (or any Atari ST computer) from Silica Shop, you will get a lot more, including a FREE Silica ST Starter Kit worth over £100. Read the ONLY FROM SILICA section on the left, to see why you should buy your new high power, low price 520ST-FM from Silica Shop, the UK's No.1 Atari Specialists. For further details of the range of Atari ST computers and the FREE Silica ST Starter Kit, complete and return the reply coupon below.

**ATARI 520ST-FM NOW ONLY £260 (+VAT=£299)**  
520ST-FM with 512K RAM & mono monitor £399 (inc VAT) Upgrade from 512K RAM to 1024K RAM £100 (inc VAT)

### ATARI 1040ST-F - NEW PRICE

We are pleased to announce a new reduced price point on the 1040ST-F which is now available for only £499 (inc VAT). The 1040 is a powerful computer with 1Mb of RAM and also includes a built-in 1Mb double sided 3 1/2" disk drive. The 1040 has been designed for use on business and professional applications most of which require a high resolution monochrome or colour monitor. It does not therefore have an RF modulator for use with a domestic TV set. Modulators can be fitted for £45 (inc VAT). 1040ST-F Keyboard + High Res SM125 Mono Monitor £599 (inc VAT) If you would like further details of the 1040ST-F, return the coupon below.

### MEGA ST's NOW IN STOCK

For the user who requires even more RAM than the 520 or 1040 ST's offer, the new MEGA ST computers are now available. There are two MEGA ST's, one with 2Mb of RAM and the other with a massive 4Mb. Both new computers are fully compatible with existing ST's and run currently available ST software. The MEGA ST's are styled as an expandable Central Processing Unit with open architecture and a detachable keyboard. They are supplied with GEM, a free mouse controller and all extras as with the 520 or 1040. Prices are as follows:  
MEGA ST 2Mb Keyboard + CPU £899 (inc VAT)  
MEGA ST 2Mb Keyboard + CPU + SM125 Mono Monitor £999 (inc VAT)  
MEGA ST 4Mb Keyboard + CPU £1099 (inc VAT)  
MEGA ST 4Mb Keyboard + CPU + SM125 Mono Monitor £1199 (inc VAT)  
If you would like further details of the MEGA ST's, return the coupon below.

## ONLY FROM SILICA

Finally, there's a personal computer that not only solves problems like other computers, but also solves the one problem that other computers have created. Affordability. Silica Shop are pleased to present the ST range of personal/business computers from Atari. The ST was designed utilising the most recent breakthrough in semiconductor technology, producing a personal computer that performs tasks with fewer parts. Which means it costs less to make. And less to buy. The latest ST computers now include built-in power supplies and built-in disk drives. The TOS operating system and GEM window environment are now on ROM chips which are already installed in the ST keyboard. This enables automatic instant booting when you switch on. Silica Shop are pleased to offer the complete Atari ST range. Our mail order department is situated in Sidcup and we have 3 retail outlets at Sidcup, Lion House (Tottenham Court Rd) and Selfridges (Oxford Street). We have eight years experience of Atari products, longer than any other UK company, and are well established as the UK's No.1 Atari specialist. With a group turnover of over £5 million and in excess of 80 staff, we offer you unbeatable service and support. We provide several facilities which you will find invaluable during your Atari computing life and most of these facilities are available ONLY FROM SILICA. We suggest that you read through what we have to offer, before you decide where to purchase your Atari ST.

### FREE STARTER KIT - Only From Silica

When you purchase any Atari ST keyboard, you will not only receive the best value for money computer on the market, but you will also receive the following from Atari Corporation as part of the package:  
\* BASIC Language Disk \* BASIC Manual \* ST Owners Manual \* TOS/GEM on ROM

If you buy your ST from Silica Shop, you will also receive:  
\* NECochrome Sampler - colour graphics program \* 1st Word - Word Processor  
In addition, we at Silica would like to see you get off to a flying start with your new computer, so we have put together a special **ST STARTER KIT** worth over £100, which we are giving away **FREE OF CHARGE** with every ST computer purchased at our normal retail prices. This kit is available ONLY FROM SILICA and is aimed at providing users with the valuable introduction to the world of computing. We are continually upgrading the ST Starter Kit, which contains public domain and other licensed software, as well as books, magazines and accessories all relevant to ST computing. Return the coupon below for full details.

### DEDICATED SERVICING - Only From Silica

At Silica Shop, we have a dedicated service department of seven full time Atari trained technical staff. This team is totally dedicated to servicing Atari computer products. Their accumulated knowledge, skill and experience makes them second to none in their field. You can be sure that any work carried out by them is of the highest standard. A standard of servicing which we believe you will find ONLY FROM SILICA. In addition to providing full servicing facilities for Atari ST computers (both in and out of warranty), our team is also able to offer memory and modulator upgrades to ST computers.

**1Mb RAM UPGRADE:** Our upgrade on the standard Atari 520ST-M or 520ST-FM keyboard will increase the memory from 512K to a massive 1024K. It has a full 1 year warranty and is available from Silica at an additional retail price of only £86.96 (+VAT = £100).

**TV MODULATOR UPGRADE:** Silica can upgrade the 1040ST-F to include a TV modulator so that you can then use it with your TV set. This is an internal upgrade and does not involve any untidy external boxes. A cable to connect your ST to any domestic TV is included in the price of the upgrade which is only £48 (inc VAT). The upgrade is also available for early 520ST computers at the same price.

### THE FULL STOCK RANGE - Only From Silica

We aim to keep stocks of all Atari related products and our warehouse carries a stock of over £15 million. We import many software titles direct from the USA and you will find that we have new releases in advance of many of our competitors. Unlike dealers who may only stock selected titles, we have the full range. In addition, we carry a complete line of all books which have been written about the Atari ST. A range as wide as ours is something you will find is available ONLY FROM SILICA.

### AFTER SALES SUPPORT - Only From Silica

Rest assured that when you buy your ST from Silica Shop, you will be fully supported. Our free mailings give news of releases and developments. This will help to keep you up to date with new software releases as well as what's happening in the Atari market. And in addition, our sales staff are at the end of a telephone line to service all of your ST requirements. If you purchase an ST from Silica and would like any technical advice, we will be full time in the team to help you get the best from your new computer. Because we have both the staff and the systems specifically dedicated to providing after sales service on Atari ST computers, we are confident that our users enjoy an exceptionally high level of support. This can be received ONLY FROM SILICA.

### FREE CATALOGUES - Only From Silica

At Silica Shop, we recognise that serious users require an in-depth information service, which is why we mail free newsletters and price lists to our ST owners. These are up to 48 pages long and are crammed with technical details as well as special offers and product descriptions. If you have already purchased an ST, and would like to have your name added to our mailing list, please complete the coupon & return it to us. This information service is available ONLY FROM SILICA.

### FREE OVERNIGHT DELIVERY - From Silica

Most orders are processed through our computer within 24 hours of receiving them. Most hardware orders are sent by the overnight GROUP 4 courier service **FREE OF CHARGE** to customers within the UK. This method helps to ensure minimum delay and maximum protection.

### PRICE MATCH - Only From Silica

We hope that the combination of our low prices, FREE UK delivery service, FREE Starter Kit and FREE after sales support, will be enough to make you buy your Atari equipment from Silica Shop. If however, there is something you wish to purchase, and you find one of our competitors offering it at a lower price, then please contact our sales department, providing us with our competitor's name, address and telephone number. If our competitor has the goods in stock, we will not only match the offer on a 'same product - same price basis' and still provide you with our normal free delivery. We realise that we are not the only company who will match a competitor's price. However, if you come to us for a price match, you will also be entitled to our after sales service, including free newsletters and technical support. This makes our price match promise rather special, something you will receive ONLY FROM SILICA. We don't want you to go anywhere else for your Atari products. So shop at Silica, the UK's No.1 Atari Specialist.
